Jonathan Westerfield, Music Man

Summary: The purpose of this app is to play music

Features:
- Will list all of the music files we can play
- Can pause, play, skip and replay songs
- Will display the album art if the song has it
- User can create playlist of songs
- Will either pull from Spotify API or have its own music library in the resource files

Activities:

Activity 1: The main activity will simply be a listview of all the songs that can be played along with the artist of the song in the same listview element

Activity 2: This will be a new activity that switches to the music player portion of the app where it displays the song artist, album, genre and cover art

Dynamic UI Elements

Fragment 1: The pause/play, skip, and forward buttons will be present on the main listview activity if the phone is turned horizontal

Fragment 2: When turned horizontal, the music player will display the previous song and the next song to be played.
